Zoinks, that was easy.

But what if? ...

There is more than one payment per rental?

There are negative payments?

There are payments not associated to a rental?

There are payments associated
to more than one rental?

There are payments before the rental?

There are payments in the future????

```
./runner.sh

 actual  | expect | did_pass |                          text
---------+--------+----------+----------------------------------------------
 1       | 0      | false    | all staff have a picture
 0       | 0      | true     | Payments can not happen before rentals
```

```
./queries/test/YOUR_TEST.sql

WITH text AS (
  SELECT 'something to describe the test'
), expect AS (
  SELECT <SOMETHING> AS value
), actual AS (
  SELECT <SOMETHING_ELSE> AS value
)
:evaluate_test
```
